

## SINGLE-PHASE MOTORS

## TERMINAL BOX

The location of the terminal box (viewed from drive end) in standard design is on top; on the right or on the left are possible.

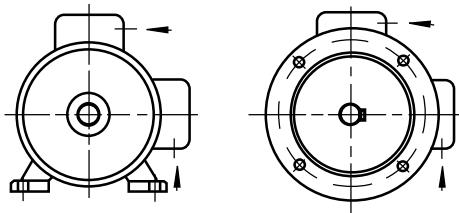

For motors with mountings IM B6, IM B7, IM B8, IM V5, IM V6 the location of the terminal box is related to an IM B3 mounting.

The position of the entry openings can be adjusted to suit the existing connection facilities by turning through 90°. Should special accessories be used (temperature detectors, anti-condensation heating, etc.) please enquire.

For motors in standard design, the cable gland does not belong to our scope of delivery.

The dimension tables always show the maximum distance to the outermost edge of the available terminal boxes. This maximum value may, however, be smaller, depending on the design of the terminal box. If the space for mounting is very limited, please enquire.

Direction of cable entries

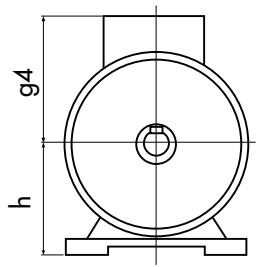

Frame size	Degree of protection	Thread for cable entry/cable diam.		Max. external mm
		Metric <sup>1)</sup>	Pg <sup>2)</sup>	
56 - 71	IP 55	1 x M16	1 x Pg 11	12
80 -100	IP 55	1 x M20	1 x Pg 13.5	16

1) Pitch 1.5

2) Pg thread to DIN 40 430 (on request)

1) Frame size 80-100 the position of the terminal box is close to drive end

## CONNECTION DIAGRAMS

Single-phase motors AMM and AMME series are designed for single-rated voltage; motors AMD and AMDE series for dual voltage. The windings (main and auxiliary winding) are connected to the capacitor supplied with the motor.

The direction of rotation can be reversed by inverting the winding ends as follows:

- main winding for motors with one supply voltage
- auxiliary winding for dual voltage motors

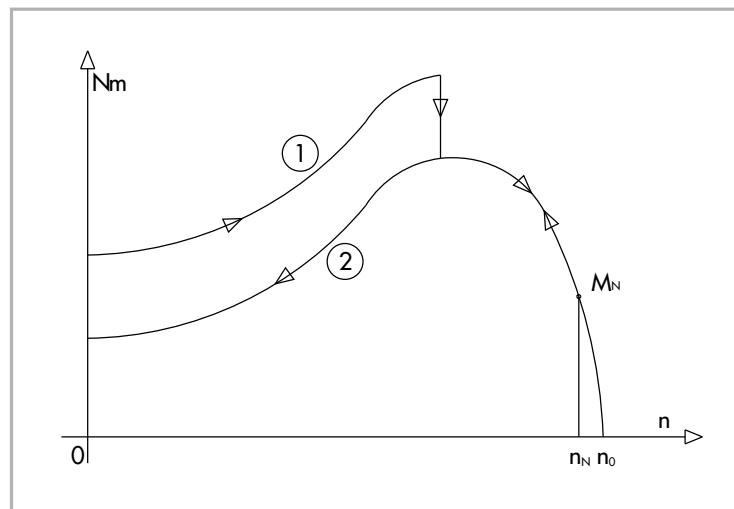

## ELECTRONIC STARTING DEVICE (SE XX)

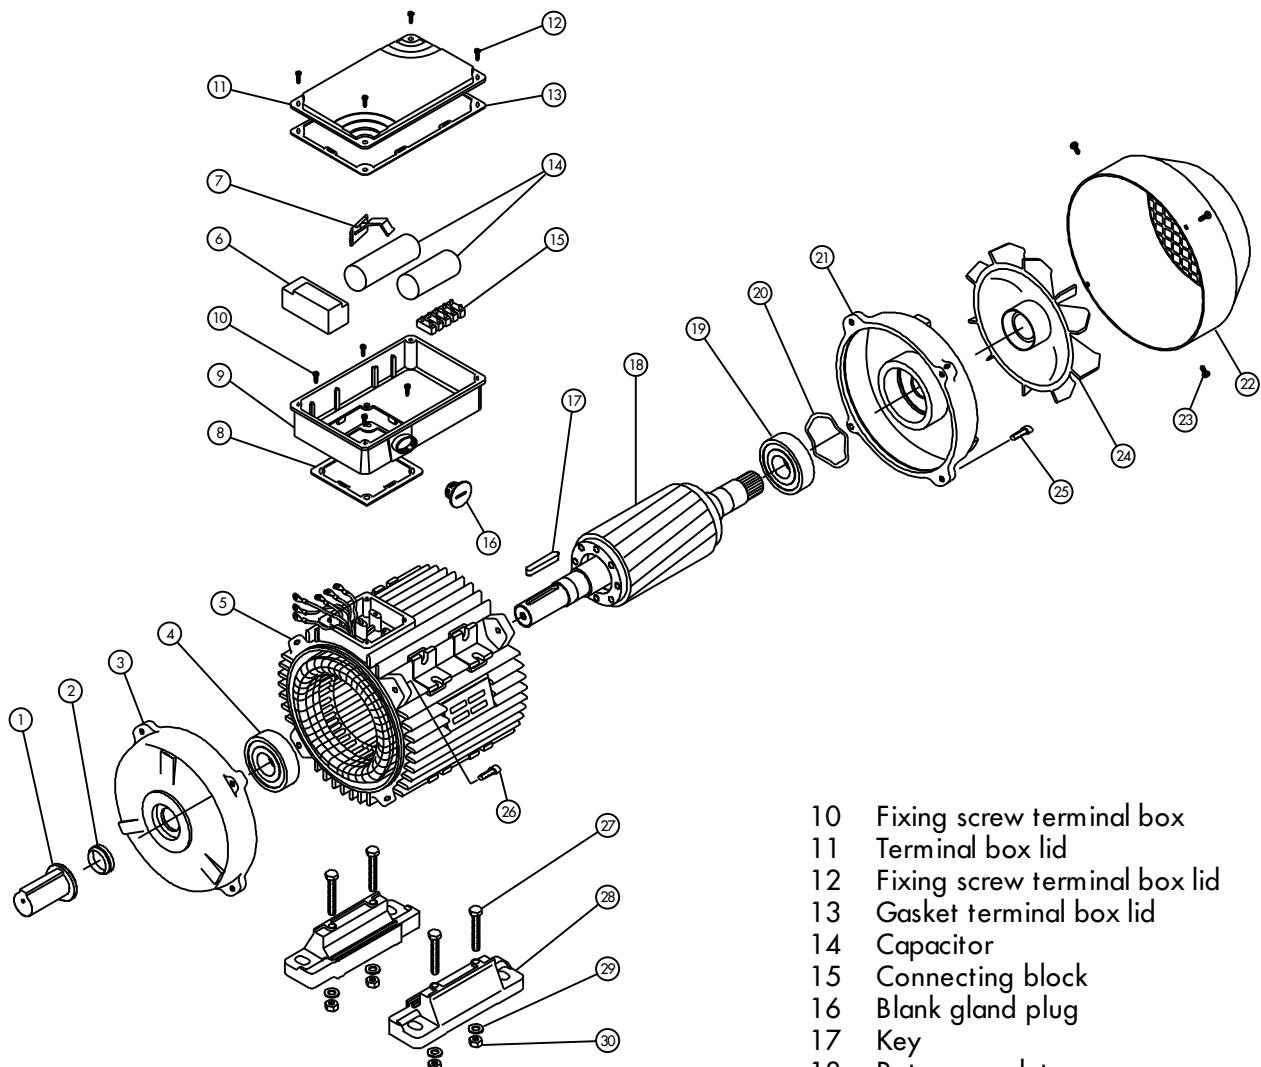

Single-phase motors with one single capacitor generally have lower starting torques than the full load torque. When higher starting torques are required, the motor is equipped with an additional starting capacitor. It is connected by the electronic starting device (SE XX) in the moment of starting and disconnected automatically proximate to the pull-out torque (see figure). At this point the torque characteristic for the running capacitor (characteristic 2) applies again.

Characteristic 1 is not reversible. The starting capacitor is reconnected only when restarting the motor. In case of overload, characteristic 2 has to be applied.

Time between stop and restart of the motor must be higher than 15 s.

## SPARE PARTS

### PART DESCRIPTION

- 1 Shaft protection
- 2 Dust seal drive end
- 3 Endshield drive end
- 4 Bearing drive end
- 5 Stator frame
- 6 Starter
- 7 Fixing device capacitor
- 8 Gasket terminal box
- 9 Terminal box

- 10 Fixing screw terminal box
- 11 Terminal box lid
- 12 Fixing screw terminal box lid
- 13 Gasket terminal box lid
- 14 Capacitor
- 15 Connecting block
- 16 Blank gland plug
- 17 Key
- 18 Rotor complete
- 19 Bearing non-drive end
- 20 Pre-load washer
- 21 Endshield non-drive end
- 22 Fan cover
- 23 Fixing screw fan cover
- 24 Fan
- 25 Fixing bolt endshield non-drive end
- 26 Fixing bolt endshield drive end
- 27 Fixing bolt motor feet
- 28 Motor feet
- 29 Fixing washer motor feet
- 30 Fixing nut motor feet

In enquires and orders for spare parts please state always

Designation of spare part, motor type, mounting arrangement, motor serial number (Product No. (E-No.) when available)  
Enquiries and orders cannot be handled without these data.

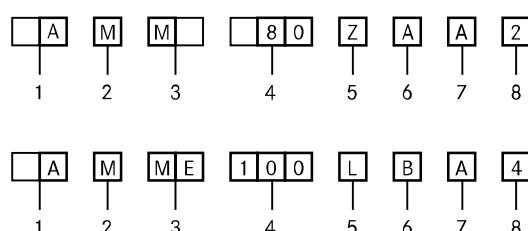

## TYPE DESIGNATION

Apart from other information, it is necessary to specify the exact type designation in all enquiries, when ordering spare parts or replacement motors or when asking for documentary information.

The type designation of our motors comprises 8 points of reference, each of which may consist of several letters and/or numerals. The meaning of each symbol can be seen from the following table. For motors not included in our standard range, special symbols may be used which are not listed here.

Ref. point	Meaning	Description of symbols used for our motors	
1	Type of motor	A	Asynchronous motor
2	Cooling	M	Surface cooled with external fan, cooling fins
3	Type of motor	M ME D DE	Single-phase motor Single-phase motor with starting capacitor Single-phase dual-voltage motor Single-phase dual-voltage motor with starting capacitor
4	Shaft centre height	56, 63, 71, 80, 90, 100	
5	Frame length	Z S M L	Mechanical dimension (short) Mechanical dimension (medium) Mechanical dimension (long)
6	Mechanical design and output value	A B C D	
7	Frame material	A	Aluminium frame
8	Number of poles	2 4 6
